

The next generation of smart charge controllers

CC613 charge controller: Cost-effective controller for compact design of a private wallbox

User safety comes first

Thanks to the DC residual current detection in combination with an RCD type A and other integrated safety features, operating the wallbox is not only simple but also absolutely safe.

Suitable for all standard electric vehicles

that are charged via a type 2 or type 1 charging cable.

Integration into existing smart home solutions possible

The Ethernet interface allows easy connection to existing home energy management systems.

Future-oriented standard

The Powerline Communication (PLC) opens up the possibility of implementing plug & charge or autocharge.
