

CP924-E

Hospital solutions from Bender

Essential: Safety in Group 2 rooms

What if...

... there was an information centre where medical staff no longer had to worry about complicated controls?

... medical staff were informed immediately when a fault occurs and given clear, straightforward instructions?

The CP924-E is the answer. This theatre control panel allows all important devices in the operating theatre to be controlled and monitored. In addition, all condition information of devices is clearly displayed.

The most important information and functions for operating theatres:

Medical staff often need access to the same alarm functions and equipment controls in operating theatres. We have developed a solution that meets these requirements.

- Clock
- Timer
- Countdown
- Insulation monitoring
- Room temperature controls
- Humidity controls
- Ambient light dimmer
- Light group 1 and 2 on/off
- Surgical light on/off
- UPS monitoring
- Monitoring of medical gases
- Fan/HVAC on/off
- Fan/Ventilation reduction
- Cleaning mode
- Alarm bar

We have combined these functions and features in a compact device which is easy to install (plug & play) – without time-consuming programming. The handling follows a clear 1-click concept and impresses with its simplicity.

Features

- Complete control technology in a single wall box
- Easy installation (plug & play)
- Low installation depth of max. 91 mm

All important functions for operating theatres in one device

- Easy operation
- Hygienic glass surface
- Easy to clean

CP924-E

The CP924-E in a nutshell:

- Central monitoring and control unit in operating theatres for medical staff
- All important information available at a central location
- Control of lights, timer, HVAC, surgical lights etc.
- Monitoring of power supply and medical gases
- Visual and acoustic alarms

Highlights

■ Timer/Timer Elapsed

Operating times can always be kept in view by means of the countdown and timer function. The portrait mode layout and the integration of timer(s) and clock at the top of the display make this information clearly visible anywhere in the operating theatre.

■ Alarm pop-up and text

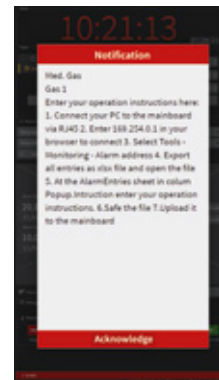

In the event of a fault, alarm text is displayed with instructions and actions. Medical staff are informed of the fault location and how it can be eliminated. This prevents uncertainties during troubleshooting.

■ Cleaning Mode

Prevents unintentional operation of buttons and switches while cleaning the glass surface.

Clearly visible timer

Striking alarm pop-up
