

CTBC17 series

AC/DC sensitive measuring current transformers

Measuring current transformer CTBC17

Device features

- Suitable for AC/DC sensitive residual current measurement according to IEC 62752 and IEC 60755
- Suitable for DC fault current monitoring to protect type A RCDs in conjunction with the listed evaluators
- Shield to prevent interferences caused by high load currents and external magnetic fields
- PCB mounting
- Connection cable for direct mounting available
- Can be used in applications according to
 - IEC 62020
 - IEC 62752
 - IEC 61851-1
 - IEC 62955
 - UL2231

Approvals

(conformity for cable variant only)

UL File E173157

Product description

The AC/DC sensitive measuring current transformers can be used in all earthed and unearthing DC, AC, and 3(N)AC systems. The measuring current transformers feature an integrated magnetic field shielding to prevent interferences from external magnetic fields.

Variants are available both for vertical PCB mounting and for cable connection. The RCMB104 and RDC104 evaluators are available for the PCB variant.

The cable variant is connected to the evaluators (e.g. CC612, CC613, ICC1324) via a six-wire cable.

Applications

- AC/DC sensitive residual current measurement in power supply systems up to a rated voltage of 600 V and a rated current of 80 A, where DC fault currents can occur due to the existing converters.

Installation instructions measuring CTs

The measuring current transformer must be connected to the evaluator before commissioning the system.

Output connections shall be powered by Class 2 or Limited Voltage / Limited Current circuits!.

1	Primary conductor	
2	PCB application	
3	Feed-through direction (any)	
	All current-carrying cables must be routed through the measuring current transformer. Do not route any shielded cables through the measuring current transformer!	
	Never route an existing protective conductor through the measuring current transformer.	
	The primary conductors may only be bent from the specified minimum distance. The minimum bending radius specified by the manufacturers for the cables used must be observed. * Distance to 90° angle = 2 x external diameter of the measuring CT
