RCMB132-01

AC/DC sensitive residual current monitoring module
for measuring AC and DC currents up to ± 100 mA

Product description

The AC/DC sensitive residual current monitoring module monitors electrically earthed power supplies up to 300 V and connected loads up to nominal currents of 32 A for leakage and fault currents.

The module is intended for installation in distribution equipment such as PDUs (Power Distribution Units), outlet boxes or multiple socket-outlets and is supplied with DC 2...24 V.

Applications

The RCMB132-01 is designed for installation in PDUs and outlet boxes. The module can communicate with a master via an RS-485 interface via Modbus RTU. It is possible to connect several devices in a daisy chain. For this purpose, the RCMB132-01 provides two identical connectors for RS-485 (incl. power supply).

Functional description

The RCMB132-01 is used to measure residual currents and output the values via an interface. The residual current monitoring module measures both AC and DC currents. The RMS value is calculated from the DC component included in the residual current and the AC component below 2000 Hz. The RCMB132-01 continuously checks the connection of the internal measuring current transformer.

Via the RS-485 interface

- a signal proportional to the RMS value is transmitted (measured value update every 180 ms)
- alarm messages are signalled
- response values are configured
- a functional test can be started

The existing switching outputs S1 and S2 switch to alarm state when the set response value is exceeded or a malfunction occurs.

i When S2 (RMS) switches, S1 (DC) is also switched simultaneously.

Device features

- AC/DC sensitive leakage and fault current monitoring for preventive maintenance
- High resolution for implementing equipment leakage current monitoring
- Measured value and alarm transmission via Modbus RTU (RS-485)
- Frequency range DC...2 kHz
- Compact design for monitoring nominal loads up to $I_n = 32$ A
- Low load current sensitivity due to fully shielded measuring current transformer
- Continuous monitoring of the connection to the measuring current transformer
- Integrated test function
- Supply voltage DC 12...24 V

Wiring diagram

* Terminating resistor 120 Ω must only be set on the last device in the RS-485 bus chain

** An external protective circuit is especially required for inductive loads.

The maximum cable length must be limited to ≤ 10 m.

Pin assignment

Pin	Name	Description
X1, Y1	Vcc	Supply voltage (DC 12...24 V)
X2, Y2	GND	Ground
X3, Y3	B	RS-485-B
X4, Y4	A	RS-485-A
Z5	S1	Switching output 1 (DC)
Z6	S2	Switching output 2 (RMS)

The two four-pole connections **X** and **Y** are designed as combinations of sockets and plugs, the two-pole connection **Z** as a push-in terminal.

Technical data

Insulation coordination according to IEC 60664-1

Primary circuit	monitored primary conductors
Secondary circuit	Connections Vcc, GND, A, B, S1, S2
All following specifications apply to the insulation between the primary and secondary circuit	
Rated voltage	300 V
Overtoltage category	III
Rated impulse voltage	4 kV
Operating altitude	up to 3000 m AMSL
Rated insulation voltage	320 V
Pollution degree	2
Safe separation (reinforced insulation)	between primary and secondary circuit
Voltage test acc. to IEC 61010-1	AC 2.2 kV

Voltage supply

Supply voltage U_s	DC 12...24 V
Operating range of the supply voltage	$\pm 20\%$
Ripple	100 mV
Power consumption	< 0.75 W

Measuring circuit

Internal diameter primary conductor opening	15 mm
Measured value evaluation	DC, RMS
Measuring range	AC/DC ± 300 mA
Characteristics according to IEC 60755	AC/DC sensitive, type B
$I_{\Delta n1}$	
Response value	DC 3.5...100 mA (* 6 mA)
Response tolerance	0.7...1.0 x $I_{\Delta n1}$
